Ways to Slow COVID Spread

At Your Church

01

ENCOURAGE VACCINATIONS

Get the updated vaccine when it becomes available, likely in early-mid October. Don't forget influenza and RSV vaccines.

Use MERV 13 filters.
Open windows.
Use portable filter units.
Air out spaces between uses.

02

PROVIDE CLEAN AIR

03

GET A CO2 MONITOR

Measuring the CO2 in the air shows how well-ventilated your space is. It doesn't measure particles, but indicates how much people are re-breathing others' air.

Some people mask because they are prone to serious illness, and many appreciate it when others mask. Masks stop spread of all airborne diseases.

04

HAVE N95 RESPIRATORS AVAILABLE

05

REMEMBER THE BASICS

- Remind people to stay home if they are sick.
- Clean commonly touched spaces and objects.
- Wash hands regularly.
